

TRIPCard: Timely, Reportable, Integrated, P-Card

The AssetWorks TRIPCard offers fleet organizations a whole new way of managing fuel and maintenance-related purchases for employees on the go. The TRIPCard features data integration directly into FleetFocus within hours of the transaction posting. This provides increased benefits, such as improved accountability and enhanced authorization controls, with the flexibility and portability of a credit card. The functionality is incorporated right into the TRIPCard's name: Timely, Reportable, Integrated, P-Card (Purchase Card).

Timely

- Information is available in near real time, as soon as it is processed by the credit card clearinghouse. Data is then integrated automatically into FleetFocus.

Reportable

- In addition to basic transaction data, the TRIPCard can collect and report on Level III processing details such as item product code, item description, quantity, and unit price. Data collected can be associated to a driver or vehicle/unit and used for reports and dashboards within FleetFocus as soon as it is received.
- Preauthorized transaction data is available in real time and automatically integrated into FleetFocus as soon as the purchase is complete.
- Near real-time notifications of rejected transactions as they are delivered into FleetFocus gives managers the ability to quickly identify actionable information such as possible unauthorized usage and take prompt corrective action.

Integrated

- Data that is collected at the point of purchase is transmitted directly into FleetFocus as soon as it is processed by the credit card clearinghouse. This saves valuable time required for manual data entry or reconciliation from other systems. Data accuracy and integrity is also preserved through automatic system double checks that can be established.
- Authorization controls for TRIPCards can be assigned to employees or user groups and modified directly from FleetFocus, streamlining the permissions and approval process.
- FleetFocus functionality, such as notifications and dashboards, is available for TRIPCard.

P-card (Purchase card)

- Purchase cards, commonly referred to as P-Cards, allow employees to make purchases within their organization's rules and restrictions giving organizations tighter control on employee spending and allowing for more comprehensive reporting.
- Limits, such as a daily spending limits or restricted purchase ability based on job role, can be controlled directly from FleetFocus to help to proactively manage expenses.
- Transactional data, such as a meter reading, can be required at the point of purchase which is above and beyond the functionality of normal credit cards.

Timely, Reportable, Integrated, P-Card

TRIPCard has Powerful Features

- Fuel purchases are accepted at over 190,000 sites and maintenance purchases are authorized at 490,000 locations across North America
- Backed by the trustworthiness and prestige of MasterCard®
- Card captures Level III data at virtually every accepting location (Participating locations equipped with POS technology)
- Cards can be customized with enhanced authorization controls including: daily limits, dollar limits, location limits or limits by number of transactions per user, with the added ability to modify controls in real-time within FleetFocus.
- Define authorized activity, such as fuel only or fuel maintenance, at a group or user level so that managers have the power to give as much or as little purchase freedom as required for the role. TRIPCard authorized levels can be tied to role or group data that is already in FleetFocus.
- Card data is integrated into FleetFocus in near real time where it is readily available for all FleetFocus functions – such as reporting, dashboards and billing
- TRIPCard billing periods can be set to mirror your organizations' fiscal periods to optimize reconciliation process
- Receive complimentary liability protection against unauthorized employee charges with MasterCoverage® Liability Protection Program

Benefits You Can Count On

- Greater convenience for employees on the go
- Improved accountability for purchases made off site
- Access to purchases and rejected purchases (in near real time)
- Cost savings through the reduction of unauthorized purchases
- Improved accuracy of data through integration rather than relying on data entry or imports which can be prone to errors
- Improved analytics and reporting through access to near real time data
- Increased insights into your organization's fuel and maintenance related spending
- Frees up valuable time normally spent on manual data integration and reconciliation

The AssetWorks TRIPCard gives organizations unprecedented control over their fuel and maintenance purchases and provides insights into spending habits. With the powerful integration directly into FleetFocus in near real time, the TRIPCard is unlike any other p-card or credit card available to fleets.
