

# 10 Questions to Ask Before Investing in Fleet Management Software

Investing in fleet management software can be a large undertaking, like sailing the high seas. From costs to usability to implementation, there are dozens of factors that you have to consider. In the process, a couple of those important factors may slip through the planks or fall overboard! In this easy-to-read checklist, we highlight 10 of the most important questions that you want to ask before you invest in a new fleet management software:

1. Will the fleet management software have the ability to interface or extract/import information from other systems?
2. Can the fleet management software be customized to my organization to fit my needs?
3. Will the fleet management software provide training and documentation for end-users?
4. Is the fleet management software compliant with rules and regulations for security data protection?
5. Does the fleet management software provide any hosting or SaaS services?
6. Does the fleet management software have the ability for on-demand reports or ad hoc reporting for management?
7. How often are software upgrades provided for the fleet management software?
8. Does the fleet management software provide cradle-to-grave cycles for fleet?
9. Will the fleet management software be able to adjust for standard preventive maintenance for different types of assets?
10. Does the fleet management software provide ongoing support?

Hopefully this checklist helped put your mind at ease! Keep it close for regular reference as you navigate the waves, currents and storms out on the High Seas of Fleet Management software.
